

TeT Limited

Transforming Every Tomorrow

Compliance & Risk

Dark Web Scanning

Modern organisations are facing an escalating identity threat landscape:

- Credential leakage is now a leading cause of cyber incidents
- Password reuse and weak MFA enforcement amplify the risk of compromise.
- Historic breaches remain undetected, leaving long-standing exposure
- Targeted phishing and impersonation campaigns are increasingly fuelled by dark web data.
- Executive and compliance pressures require clear visibility of external threat activity.

TET Dark Web Scanning Service

The TET Dark Web Scanning Service delivers continuous monitoring, risk analysis and full remediation across your domains and user accounts.

We detect leaked passwords, exposed personal data, breached credentials and identity-related risk the moment it appears and we take action fast.

40

YEARS IN IT
EXCELLENCE

OFFICES ACROSS THE
UK, USA & EUROPE.

DEDICATED LOGISTICS FACILITY
AND TECHNICAL TEAM.

www.tet.co.uk

Early detection of credential compromise before it's exploited
Reduced risk of phishing, fraud, and account takeover
Improved identity security through enforced remediation
Full visibility of exposure trends and high-risk users
Minimal internal workload with full TET management

Monitor

Continuous scanning across dark web sources and breach data

Validate

Confirm exposure relevance, severity, and source credibility

Remediate

Password resets, MFA enforcement, access reviews, session revocation

Escalate

Highlight high-risk patterns and priority accounts

Report

Monthly insights into exposure trends, risks, and actions taken

Dark web monitoring only delivers value when it leads to action.

TET bridges the gap between detection and remediation. Turning exposure insights into immediate, measurable risk reduction.

We don't just tell you what's been breached. We fix it.

With TET, you get:

- A fully managed service that owns detection, validation, and remediation end-to-end
- Immediate action on exposed credentials – including resets, MFA enforcement, and access reviews
- Clear visibility of risk trends, high-risk users, and recurring exposure patterns
- Insight that feeds directly into your wider identity and security strategy
