

TeT Limited

Transforming Every Tomorrow

Compliance & Risk Password & Identity Management

Passwords remain one of the most common entry points for cyber attacks.

As organisations adopt more SaaS platforms, remote working, and shared access models, unmanaged credentials create significant risk.

Without proper control, businesses face:

- Password reuse and weak credential practices
- Lack of visibility over who has access to what
- Increased exposure to phishing and credential-based attacks
- Poor user adoption of security tools

What We Do

A fully managed password and credential management solution designed to secure access across your organisation.

Built around IPassword, this service combines enterprise-grade password security with ongoing management, user support, and security oversight – ensuring strong, unique credentials are enforced without adding operational burden to your internal teams.

What We Deliver

We don't just deploy a password manager — we deliver a fully managed access security service.

Adoption, Training & Support

- User onboarding and best practice guidance
- Support for browser, mobile, and SSO integration
- Ongoing engagement to drive secure behaviours

Security Monitoring & Remediation

- Identification of weak, reused, or compromised credentials
- Credential resets and risk remediation
- Investigation of systemic issues (e.g. reuse patterns)

Reporting & Oversight

- Monthly reporting on usage, risk, and adoption
- Alerts for high-risk activity
- Trend insights to support security decision-making

Policy & Access Control Management

- Password policy enforcement and continuous optimisation
- Secure sharing and role-based access controls
- Alignment with MFA and wider identity strategy

User Lifecycle Management

- Onboarding, offboarding, and licence management
- Privilege control for admins and high-risk users
- Identification of dormant or risky accounts

Platform Deployment & Configuration

- Implementation of IPassword tailored to your organisation
- Vault structure, user groups, and access policies aligned to your business

Vendor & Licence Management

- Licence optimisation and renewals
- Vendor engagement and escalation handling

We go beyond deploying a password manager — we ensure it delivers real security outcomes.

By combining IPassword with ongoing management, user support, and security oversight, we help organisations enforce strong password practices without adding internal overhead.

Ideal for organisations:

- Managing multiple SaaS platforms and user access points
- Sharing credentials across teams or departments
- Preparing for Cyber Essentials, ISO, or broader security compliance
- Lacking visibility or control over password and access risk

With TET, you get:

- Strong, unique passwords enforced across all users
- Reduced risk of credential-based attacks
- Clear visibility and control over access
- High user adoption through continuous support and training
- A fully managed service that removes day-to-day burden from your team
