TeT Limited

Transforming Every Tomorrow

Penetration Testing as a Service (PTaaS)

Traditional penetration testing gives you a snapshot of risk...

but systems evolve and threats emerge between tests.

PTaaS provides year-round coverage, combining consultant-led testing with structured remediation activity and continuous oversight.

TET HANDLES IDENTIFICATION, REMEDIATION, REPORTING AND ONGOING VERIFICATION...

As part of TET's penetration test as a service You receive clear reporting, the ability to assign tasks through GuardNest and full remediation delivered by TET.

This approach reduces exposure time and gives you stable visibility across internal and external assets.

Benefits of the Service

TeT Limited

You Gain

- A complete annual penetration test across internal and external infrastructure.
- Clear reporting for technical and management audiences.
- A remediation check confirming that fixes have been applied correctly.
- Full remediation delivered by TET, removing the burden from internal teams.
- Monthly scanning managed by TET, highlighting new vulnerabilities as they appear.
- Faster issue closure because TET handles identification, remediation and reporting.
- Better confidence heading into audits or re-certification cycles.

Managed Service Elements

TET manages the ongoing elements of PTaaS, including remediation and continuous scanning, while Pentest partners deliver the manual consultancy stages.

Stage 1 – Manual Consultancy (Pentest People)

External Infrastructure Assessment

- Testing of up to two live IPs.
- Reconnaissance, port scanning, service identification and exploitation where applicable.
- Identification of exposed services and weaknesses in configuration.

Internal Infrastructure Assessment

- Testing across 18 virtual servers.
- Enumeration, exploitation and privilege escalation assessment.
- Mapping of attack paths and demonstration of possible compromise routes.

Outputs

- Detailed technical reporting.
- Management-level summaries.
- A structured debrief session.

Stage 2 – Remediation Check (Pentest People)

One remediation check is provided on up to five vulnerabilities within six months. GuardNest will show:

- issues still present
- issues successfully remediated
- updated summaries for technical and management teams

This confirms the effectiveness of remediation work before the next assessment cycle.

Stage 3 – Ongoing Scanning and Remediation (Delivered by TET)

TET take responsibility for all continuous scanning and vulnerability remediation. This is where the managed service value is strongest, giving you operational continuity and reducing internal workload.

What TET provides:

- Monthly scanning of your internet-facing assets using recognised tools.
- Analysis and interpretation of all scan results, removing noise and false positives.
- GuardNest updates with clear, prioritised findings.
- Full remediation, including applying patches, configuration changes or control updates depending on the issue.
- Progress tracking, showing which issues have been resolved and which remain open.
- Monthly reports providing a clear, business-friendly view of current risk levels.

Built on Expertise. Driven by Relationships.
