

## Transforming Every Tomorrow

### Compliance & Risk SaaS Security & Governance

SaaS applications now sit at the heart of how organisations operate.

Microsoft 365, Google Workspace, and a growing ecosystem of third-party tools power collaboration, data sharing, and day-to-day productivity. But as adoption has accelerated, control hasn't kept pace.

- Users introduce new applications **without IT visibility**
- Data is shared externally with **limited governance**
- Third-party integrations create **hidden access risks**
- Permissions and roles become misaligned over time
- Licences are **over-provisioned and underutilised**

## What We Do

TET provides full visibility, control, and optimisation across your SaaS estate. Turning a fragmented environment into a secure, governed, and efficient platform.

Powered by Augmentt, we deliver:

- Continuous discovery of all SaaS applications in use
- Monitoring of security posture, configurations, and integrations
- Management of user access, roles, and permissions
- Remediation of risky behaviours and misconfigurations
- Ongoing optimisation of licence usage and spend

We don't just show you what's happening, we take action to fix it.

# 40

YEARS IN IT  
EXCELLENCE

OFFICES ACROSS THE  
UK, USA & EUROPE.

DEDICATED LOGISTICS FACILITY  
AND TECHNICAL TEAM.

# Complete visibility. Strong governance. A SaaS environment you can actually control.

TET helps organisations regain control. Bringing visibility, governance, and security back to the SaaS environments that now underpin modern business.

## Discover

Identify all SaaS applications in use – including unmanaged and shadow IT

## Assess

Evaluate risk across configurations, permissions, integrations, and user behaviour

## Remediate

Enforce security controls, remove risky access, and standardise configurations

## Govern

Manage user lifecycle, access rights, and licence allocation

## Optimise

Align SaaS usage with cost, performance, and business need

## Report & Improve

Provide clear insight into risks, trends, and continuous improvement opportunities

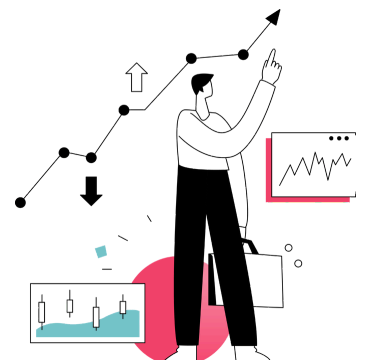

## SaaS visibility alone doesn't reduce risk. Control does.

Most organisations already have access to data about their SaaS environment – but lack the time, structure, and resource to turn that insight into meaningful action.

### TET bridges that gap.

We take ownership of the entire SaaS security lifecycle – from discovery and monitoring through to remediation, governance, and optimisation. Giving you not just visibility, but control.

By combining security, identity governance, and cost optimisation into a single managed service, we help organisations move beyond reactive management and establish a SaaS environment that is secure, efficient, and ready to scale.
